

Finding Views Maintained for Material

By Raymond

In order to know the views that are maintained for a material, go to transaction **SE11** and the table **MARA**.

Data Ty...	Field	Data element	Key	Short Description
CLNT	MANDT	MANDT	<input checked="" type="checkbox"/>	Client
CHAR	MATNR	MATNR	<input checked="" type="checkbox"/>	Material Number
STRU	. INCLUDE	EMARA	<input type="checkbox"/>	Data Division MARA
DATS	ERSDA	ERSDA	<input type="checkbox"/>	Created On
CHAR	ERNAM	ERNAM	<input type="checkbox"/>	Name of Person who Created the Object
DATS	LAEDA	LAEDA	<input type="checkbox"/>	Date of Last Change
CHAR	AENAM	AENAM	<input type="checkbox"/>	Name of Person Who Changed Object
CHAR	VPSTA	VPSTA	<input type="checkbox"/>	Maintenance status of complete material
CHAR	PSTAT	PSTAT_D	<input type="checkbox"/>	Maintenance status

The field **VPSTA** and **PSTAT** helps us in identifying the views maintained for a material. The difference between these 2 fields is:

VPSTA

This contains the views that have been created for the material. Please note that this field also holds the values for the views which are created automatically (For e.g., Plant stock (X) and Storage stock (Z) are created automatically).

PSTAT

Contain the list of views that had been created manually.

User department	Maintenance status
Work scheduling	A
Accounting	B
Classification	C
MRP	D
Purchasing	E
Production resources/tools	F
Costing	G
Basic data	K
Storage	L
Forecasting	P
Quality management	Q
Warehouse management	S
Sales	V
Plant stocks	X
Storage location stocks	Z

If the value in the field **VPSTA** is **KD**, it means the Basic data and **MRP views** are maintained for that material.

Here is a sample screenshot of the **MARA** entries:
